

ENGINE STARTER FOR REMOTE-CONTROL TOY CAR

ABSTRACT OF THE DISCLOSURE

5 An engine starter adapted to substitute for the traction rope type engine
starter of the engine of a remote-control toy car is constructed to include a casing
covered with a cover plate to hold a cushion, a driven bevel gear, a driving bevel gear,
a locating block and a locating cap on the inside for enabling the starter rod of an
electric auxiliary starter to be coupled to the polygonal coupling hole at the driven
10 bevel gear and operated to start the engine.
